UNIX® is a registered trademark of The Open Group.

This product includes an interface of the 'zlib' general purpose compression library, which is Copyright © 1995-2002 Jean-loup Gailly and Mark Adler.

Documentation Updates

HPE Big Data Support provides prompt and accurate support to help you quickly and effectively resolve any issue you may encounter while using HPE Big Data products. Support services include access to the Customer Support Site (CSS) for online answers, expertise-based service by HPE Big Data support engineers, and software maintenance to ensure you have the most up-to-date technology.

To access the Customer Support Site

- go to <https://customers.autonomy.com>

The Customer Support Site includes:

- **Knowledge Base.** An extensive library of end user documentation, FAQs, and technical articles that is easy to navigate and search.
- **Support Cases.** A central location to create, monitor, and manage all your cases that are open with technical support.
- **Downloads.** A location to download or request products and product updates.
- **Requests.** A place to request products to download or product licenses.

To contact HPE Big Data Customer Support by email or phone

- go to <http://www.autonomy.com/work/services/customer-support>

Support

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent updates or to verify that you are using the most recent edition of a document, visit the Knowledge Base on the HPE Big Data Customer Support Site. To do so, go to <https://customers.autonomy.com>, and then click **Knowledge Base**.

The Knowledge Base contains documents in PDF and HTML format as well as collections of related documents in ZIP packages. You can view PDF and HTML documents online or download ZIP packages and open PDF documents to your computer.

New in this Release 5

Resolved Issues 6

Documentation 7

New in this Release

This section lists the enhancements to Query Manipulation Server version 11.1.0.

- QMS now supports stored state tokens including cardinal placements and promotions. If you send a Query action through QMS with the `StoreState` parameter set to `True`, QMS now stores the result including any cardinal placements. If the Query action also has the `Promotions` parameter set to `True`, QMS stores the promotion results.

You can control the lifetime of the stored state tokens by setting the `StoredStateTokenLifetime` and `StoredStateTokenEpiryPeriod` configuration parameters in the `[Server]` section of the QMS configuration file. You can also set the `StatePath` configuration parameter in the `[Paths]` section to change the directory where QMS stores the stored state token information. For more information, refer to the *QMS Reference*.

- The `ShowPermissions` action now shows the rules that define whether a particular origin IP has a particular type of permission. This information is returned only if you send the `ShowPermissions` action from a client IP that is configured in the `AdminClients` configuration parameter.

Resolved Issues

This section lists the resolved issues in Query Manipulation Server version 11.1.0.

- The request cooker was not able to modify the value of the PromotionsScope parameter.
- The ShowPermissions action did not return details for IndexClients, ProxyClients, ServiceStatusClients, and ServiceControlClients if these values were not explicitly set in the configuration file.

Documentation

The following documentation was updated for this release.

- *QMS Administration Guide*
- *QMS Reference*
